

At this time Colleen's Catering and Vintage Venue are working with area Businesses and Weddings to reschedule meetings and wedding receptions. We are following the guidelines set forth for the state of Nebraska via the CDC. Limiting the size of public events and gatherings throughout the state of Nebraska to 10 people or less, during the time period of March 16-March 31. Here are some helpful hints for what to do when you do have a gathering in the future, as well as basic cleaning guidelines. We look forward to getting back to a normal routine, but more importantly we are looking forward to keeping everyone safe and healthy.

Here are some helpful hints when we are able to have events again

- Have hand sanitizer stations
- Limit the number of people
- Limit slow dances
- Have a designated person open the door
- Limit hugging
- Don't have a finger food bar

We want you to know that Colleen's Catering and Vintage Venue is here for you, and we are keeping a close eye on the CDC recommendations as the situation unfolds. We will share updates and advice as best we can when we can.

Clean, Clean Clean. Nothing fancy needed. This is from the CDC page. We'll be doing a lot of cleaning at home and at work for the following weeks.

How to Clean and Disinfect Surfaces

If surfaces are dirty, they should be cleaned using a detergent or soap and water prior to disinfection.

For disinfection, diluted household bleach solutions, alcohol solutions with at least 70% alcohol, and most common EPA-registered household disinfectants should be effective. Diluted household bleach solutions can be used if appropriate for the surface. Follow manufacturer's instructions for application and proper ventilation. Check

to ensure the product is not past its expiration date. Never mix household bleach with ammonia or any other cleanser. Unexpired household bleach will be effective against coronaviruses when properly diluted.

Prepare a bleach solution by mixing:

5 tablespoons (1/3rd cup) bleach per gallon of water or
4 teaspoons bleach per quart of water

Products with EPA-approved emerging viral pathogens claims   are expected to be effective against COVID-19 based on data for harder to kill viruses. Follow the manufacturer's instructions for all cleaning and disinfection products (e.g., concentration, application method and contact time, etc.).
